

Project Design Phase: Proposed Solution Template

Date	7 July 2026
Team ID	
Project Name	Nutrition Assistant
Maximum Marks	2 Marks

1. Proposed Solution details

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Many individuals, including college students, working professionals, and fitness enthusiasts, struggle to maintain healthy eating habits because they lack easy access to accurate nutritional information and an efficient way to track their daily meals and calorie intake. Existing solutions are often complex, expensive, or require manual calculations, making consistent nutrition tracking difficult.
2.	Idea / Solution description	The proposed solution is an AI Nutrition Assistant, a web application developed using the MERN Stack (MongoDB, Express.js, React.js, and Node.js). The application allows users to search for food items, view detailed nutritional information, log meals, calculate daily calorie intake automatically, and monitor their nutrition through an interactive dashboard. This helps users make informed dietary decisions and maintain a healthier lifestyle.
3.	Novelty / Uniqueness	The application combines food search, nutrition analysis, and meal tracking within a single, user-friendly platform. It provides automatic calorie calculations, personalized meal records, and a simple interface designed for both beginners and health-conscious users. Unlike many existing applications, the proposed solution focuses on ease of use and accessibility without requiring premium subscriptions for basic features.
4.	Social Impact / Customer Satisfaction	The solution promotes healthier eating habits by increasing awareness of nutritional values and encouraging users to monitor their daily food intake. It supports disease prevention through better dietary choices, improves overall well-being, and provides a convenient experience that increases user satisfaction and engagement.

Project Design Phase: Proposed Solution Template

S.No.	Parameter	Description
5.	Business Model (Revenue Model)	The application can adopt a Freemium Model, where core features such as meal tracking and nutrition information are available free of cost, while premium features like AI-based personalized diet plans, advanced nutrition reports, fitness integration, and expert consultation can be offered through subscription plans. Additional revenue can be generated through partnerships with nutritionists, fitness centers, and healthy food brands.
6.	Scalability of the Solution	The application is designed to scale efficiently by supporting a growing number of users and expanding its features. Future enhancements may include AI-powered diet recommendations, barcode scanning for packaged foods, multilingual support, wearable device integration, mobile applications, and cloud deployment to improve performance and availability.
